## **Hiring for Scientist II Position**

Ceres Nanosciences Inc. (“Ceres”) is engaged in the research, development, and commercialization of innovative sample preparation products, based on its proprietary Nanotrap® particle platform. Nanotrap® particles capture, concentrate, and preserve the most valuable analytes, enabling early and accurate detection of diseases such as cancer, cardiac, neurological, and infectious diseases, resulting in improved patient outcomes and reduced health care costs.

The Scientist II will work closely with the Senior Scientists and the Applications Team to develop new methods and to generate data required to develop and support Nanotrap products for nucleic acid detection and extraction, primarily in the oncology space, liquid biopsy, as well as other advanced molecular biology applications.

Position requires a bachelor's degree or foreign equivalent and experience in Molecular Biology, Biochemistry, Genetics, Biology, or related field. Minimum of 2 years of experimental design, troubleshooting, and wet lab experience in nucleic acid extraction and analysis (i.e. PCR), cancer biology, and/or cell-free nucleic acids.
